needle attached to the carburetor. Set the jet needle valve C-clip to its highest setting (the setting that allows the jet needle to go in the furthest). Turn the adjusting screw 6-8th of a turn out. Test the bike by riding it.

CNS Carburetor Tuning Guide | Bikeberry Blog

Inspect float for any cracks or holes. Check float bowl height, if float bowl height is too low, fuel will not enter the engine properly; if float bowl height is too high, too much fuel will enter the engine. Adjust float bowl plunger fork to adjust height of float. If engine still does not start, proceed to step #11.

2 Stroke Bike Engine Trouble Shooting

Some carburetors have a slow speed fuel adjusting screw that regulates the fuel/air mixture in the lower rpm range. Others have an air adjusting screw. Turning this screw clockwise will reduce the amount of air entering the carburetor, and will, therefore, richen the mixture (refer to a shop manual for correct settings).
