commonly found in the environment growing as unicellular yeast and they reproduce by budding.; In the natural environment, it exists as a saprophytic forming a large budding yeast morphology. It is an encapsulated yeast-like fungus that is isolated from dried avian (particularly pigeon) and bat excreta, and in dust contaminated with such droppings.

Cryptococcus neoformans is a spherical, encapsulated, non-myceliated, non-fermenting fungal cell . Among pathogenic fungi, C. neoformans is unique in that it possesses a mucinous capsule. Small-sized basidiospores (1.8 to 3.0  $\mu\text{m}$ ) can turn into yeast cells, the form preferred at 37°C, or can form dikaryotic
