Harley Davidson Evo Engine Specs

The small Evolution engine permanently replaced the Ironhead engine, and as of November 2010, is still being produced by the Harley-Davidson motorcycle company. It can be found in Harley-Davidson's 883, 1100 and 1200 XLH Sportster models. The larger Evolution engine, however, was replaced by the Twin Cam 88 engine in 1999.

Harley-Davidson Evolution Engine Specifications | It Still ...

The Evolution engine (popularly known as Evo) is an air-cooled, 45-degree, V-twin engine manufactured from 1984 by Harley-Davidson for the company's motorcycles.It was made in the 1,340 cc (82 cu in) displacement for Harley-Davidson Big V-twins bikes, replacing the Shovelhead engine until 2000 when the last EVO was placed in a production factory custom FXR4 (FXR2 and FXR3 were the first CVOs).

Harley-Davidson Evolution engine - Wikipedia

The Harley-Davidson Evolution engine comes with 1340 cubic centimeters or 80 cubic inches and is used to power the Touring, Dyna and Softail ranges of cruiser motorcycles. The torque produced by the engine depends on which bike it is fitted to and the bike's type of fuel induction.

What Are the Specifications for a Harley 1340 Torque? | It ...

The Evolution (Evo) engine is a V-twin engine that has been manufactured by Harley-Davidson since 1984 for a variety of different motorcycle models. The engine design is often credited with saving Harley-Davidson from bankruptcy after the management buyout and subsequent reorganization that the company went through during the early 1980s.

A brief history of the Harley-Davidson Evolution Engine ...

Since 1929, Harley-Davidson engines have also been offered as smaller V-twin motors. Sometimes these smaller models are very difficult to distinguish from their larger brothers, but one rule has remained constant: Big Twins have always carried their final-drive chains (or belts) on the left side of the bike, while the smaller models have always had them on the right.

Harley-Davidson Motorcycles Specs, Technical Data

The Harley-Davidson Twin Cam are motorcycle engines made by Harley-Davidson from 1998 to 2016. Although these engines differed significantly from the Evolution engine, which in turn was derived from the series of single camshaft, overhead valve motors that were first released in 1936, they share a number of characteristics with nearly all previous Harley-Davidson engines.

In the Evolution engine, Harley-Davidson contracted the German firm, Mahle, to produce the pistons. "The untold story is the cooperation we received from the unions," says John. After a 40 percent workforce reduction and a 10 percent pay cut across the board, the unions conceded to having the pistons and bearings made outside the company, in order to produce a better product and increase ...

1984 Harley-Davidson Softail/V2 Evolution | Hemmings

The engine highlighted in this week’s Engine of the Week was built for a customer up around the Toronto, Canada area. The engine is a S&S-based Harley-Davidson Evolution V-Twin, and is going to be in a Fast Bracket Race drag bike. “The engine is built to stay together for a long time and provide a lot of runs,” Dahl says.
