**Honda Civic I Vtec Engine**
VTEC is a system developed by Honda to improve the volumetric efficiency of a four-stroke internal combustion engine, resulting in higher performance at high RPM, and lower fuel consumption at low RPM. The VTEC system uses two camshaft profiles and hydraulically selects between profiles. It was invented by Honda engineer Ikuo Kajitani. It is distinctly different from standard VVT systems which change only the valve timings and do not change the camshaft profile or valve lift in any way.

In the United States, they are used by Honda Civic 1999 and 2000 models. The 1996 models of Civic VTi also used B-Series engines. Outside the United States, these were the primary engines in Honda Civic in the 1990s. D-Series Engines - In the 1990s, most Honda Civic models in the United States were equipped with a D-Series four-cylinder engine.

At low RPM only one intake valve opens, which decreases fuel consumption, then at 2,200 rpm, it engages the second intake valve, allowing it to operate like a normal 16 valve engine. Much like the A2's iVTEC system, the VTC is always active on the A3. K20A3 comes in the RSX base, Civic Si, Accord, CRV, and Element.
