What the EGR Valve
Does The EGR valve is
a small component
designed to allow the
flow of exhaust gases
into the intake
manifold in controlled
amounts. As such, it's
a simple valve that
closes and opens as
needed.

An EGR switch consists of a valve, vacuum and solenoid. When a vehicle's combustion temperature rises above 2500 degrees, the EGR valve opens and the vacuum draws in exhaust to help balance out harmful emissions. The EGR solenoid controls the vacuum process through the valve and if it malfunctions, major problems can develop.
