Labor Economics lecture 1 (1 of 2) -- Introduction - YouTube

Estimating labor supply. Let the labor supply equation be $H = X\beta + W\gamma + e$ where H is hours of work, X is a vector of personal characteristics, W is the market wage rate for the individual, and e is the error term. There

are at least two problems with estimation: (1) H cannot be negative; (2) W is unobservable for those with $H=0$.

Lecture Notes 12

Introduction What is labour economics? • labour economics is the study of the workings and outcomes of the market for labour Every society – regardless of its wealth, its form of government, or organisation of its economy - must make basic decisions: what to produce, how to produce, and for whom to produce. Labour market decisions that affect everyday well-being are made by each of the three main actors in the labour market: Individuals, firms and governments These decisions require ...

MIT Economics : David Autor

Lawrence F. Katz's research focuses on issues in labor economics and the economics of social problems. He is the author (with Claudia Goldin) of *The Race between Education and Technology* (Harvard University Press, 2008), a history of U.S. economic inequality and the roles of technological change and the pace of educational advance in affecting the wage structure.
