Biology Majors - McGraw-Hill

The study of the activities, functions, properties, and structures of cells. Cell biology focuses on the notion that the cell is the fundamental unit of life. Cells were discovered in the middle of the seventeenth century after the microscope was invented. In the following two centuries, with steadily improved microscopes, cells were studied in a wide variety of plants, animals, and microorganisms, leading to the discovery of the cell nucleus and several other major cell structures or ...

...

A natural science concerned with the study of all living organisms. Living organisms, from the viewpoint of biology (biological science), share a number of unifying themes, including their origin from the same basic cellular structure and their molecular basis of inheritance. Still, they are diverse in many other aspects.
