How to run Sysprep in Server 2012 (R2)? Follow the steps below to use Sysprep in Windows Server 2012. 1. Press Windows logo key + X at the same time. Then choose Command Prompt (Admin) from the menu. 2. Type cd \Windows\System32\Sysprep and then press Enter. 3. Sysprep can be run in 2 modes, the GUI mode and the command line. GUI mode is highly recommended.

Quick Start Guide to Sysprep in Windows Server 2012 (R2)

So here's my problem....I've created an answer file for sysprep (utilizing pass 4 and 7 only) to use upon reboot and it works fine, except that I cannot get it to join a domain automatically via the answer file. Now I've read that this is because the machine needs to have a local account established before it can join a domain.
