Investigate the decay of a radioactive substance. The half-life and the number of radioactive atoms can be adjusted, and theoretical or random decay can be observed. Data can be interpreted visually using a dynamic graph, a bar chart, and a table. Determine the half-lives of two sample isotopes as well as samples with randomly generated half-lives.

In the Half-life Gizmo, students explore radioactive decay in a safe environment, observing and graphing the decay of a hypothetical short half-life material. The graph shows both the actual decay curve for the atoms shown and the theoretical curve for a large sample. Based on the graph, students then estimate the half-life of the material.
