VBScript - Run Method (Windows Script Host) In Vbsedit, you only need to press F1 to get Help for the keyword under the cursor!

### VBScript - Run Method (Windows Script Host)
VBScript is an untyped language. Unlike Visual Basic and Visual Basic for Applications, in which the developer can define the data type of a variable in advance, all variables in VBScript are variants. There are subtypes to handle different types of data, and you can use these as you would the traditional data types in Visual Basic.
